EXPERIENCIA LABORAL

Integration Analyst

05-01-2024 - PRESENT

Accusys Technology

I currently play a key role in refactoring and digital transformation of the Macro Cell Bank application (Mobile Banking) Development Factories from the bank. My main focus is on improving the architecture and service integration, through services, microservices, REST API and service-oriented architecture (SOAP). I excel in design and construction of solutions, as well as in API modeling, definition of portfolios of microservices and compositions. I have experience in key technologies such as REST, SAP, JSON, XML, as well as authorization models and authentication, the OpenAPI specification (Swagger), working with flows and component management, modification and creation of new pipelines for transactions, including API data mapping and integration testing in test environment with distributed transmission platforms for communication between modules such as (Kafka), API management with Apigee

OBJETIVO LABORAL

Experience in the fintech and payments sector, where I have worked with different APIs, ISO8583 couriers, and payment methods such as Modo, MercadoPago, CuentaDNI, Visa and Mastercard. My goal is to provide software solutions that adapt to the client's work environment and that meet quality standards and security. Currently, I work at Hasar Sistemas, a leading company in the software development for commerce, where I am in charge of the integration of your products and solutions with REST APIs. I am passionate about continuous learning and professional development, and I am always looking to acquire new skills techniques in the world of technology
